技术规格

Background:	This gene encodes adenylate cyclase 6, which is a membrane-associated enzyme and catalyzes the formation of the secondary messenger cyclic adenosine monophosphate (cAMP). The expression of this gene is found in normal thyroid and brain tissues, as well as some tumors; and its expression is significantly higher in one hyperfunctioning thyroid tumor than in normal thyroid tissue. Alternative splicing generates 2 transcript variants.
Applications:	IHC, IF
Name of antibody:	ADCY5/6
Immunogen:	Synthesized peptide derived from internal of human ADCY5/6.
