|---------------------------------|--|
| Background: | This gene encodes beta-2-adrenergic receptor which is a member of the G protein-coupled receptor superfamily. This receptor is directly associated with one of its ultimate effectors, the class C L-type calcium channel Ca(V)1.2. This receptor-channel complex also contains a G protein, an adenylyl cyclase, cAMP-dependent kinase, and the counterbalancing phosphatase, PP2A. |
| Applications: | WB |
| Name of antibody: | ADRB2(Phospho-Ser346) |
| Immunogen: | Peptide sequence around phosphorylation site of serine 346 (R-S-S(p)-L-K) derived from Human Adrenergic Receptor beta2. |
| Full name: | adrenoceptor beta 2, surface |
| Synonyms : | BAR; B2AR; ADRBR; ADRB2R; BETA2AR |
| SwissProt: | P07550 |
