### 技术规格

<b>Background:</b>	This gene encodes a cytoplasmic linker or adaptor protein that plays a critical role in B cell development. This protein bridges B cell receptor-associated kinase activation with downstream signaling pathways, thereby affecting various biological functions. The phosphorylation of five tyrosine residues is necessary for this protein to nucleate distinct signaling effectors following B cell receptor activation.
<b>Applications:</b>	WB
<b>Name of antibody:</b>	BLNK(Phospho-Tyr96)
<b>Immunogen:</b>	Peptide sequence around phosphorylation site of tyrosine 96(D-S-Y(p)-E-P) derived from Human BLNK .
<b>Full name:</b>	B-cell linker
<b>Synonyms :</b>	bca; AGM4; BASH; LY57; SLP65; BLNK-S; SLP-65
