技术规格

Background:	This gene encodes a transcriptional repressor that binds to a conserved 14-bp 5'-repressor element and regulates expression of the 5-hydroxytryptamine (serotonin) receptor 1A gene in neuronal cells. The DNA binding and transcriptional repressor activities of the protein are inhibited by calcium. A mutation in this gene results in nonsyndromic mental retardation-3.

SwissProt:	Q6P1N0

ELISA Recommended dilution:	5000-10000
IHC positive control:	Human liver cancer and human colorectal cancer
