技术规格

Background:	The protein encoded by this gene is a nucleoplasmic protein. It binds cytidine-rich sequences in double-stranded DNA. This protein has three types of domains: MH1, MH2 (repeated three times) and MH3. It is associated with packaging, transferring, or processing transcripts. Multiple alternatively spliced transcript variants have been found for this gene, but the biological validity of some variants has not been determined.
Applications:	WB, IHC
Name of antibody:	ZNF638
Immunogen:	Synthesized peptide derived from internal of human ZNF638.
