技术规格

Background:	This gene encodes one of the proteins found in the SM N complex, which consists of several gemin proteins and the protein known as the survival of motor neuron prote in. The SMN complex is localized to a subnuclear compartment called gems (gemini of coiled bodies) and is required for assembly of spliceosomal snRNPs and for pre-m RNA splicing. This protein interacts directly with the survival of motor neuron protein and it is required for formation of the SMN complex. A knockout mouse targeting the mouse homolog of this gene exhibited disrupted snR NP assembly and motor neuron degeneration.
Applications:	ELISA, WB, IHC
Name of antibody:	GEMIN2
Immunogen:	Synthetic peptide of human GEMIN2
