技术规格

Background:	This gene encodes a member of the glycosyl hydrolase 35 family of proteins. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate the mature lysosomal enzyme. This enzyme catalyzes the hydrolysis of a terminal beta-linked galactose residue from ganglioside substrates and other glycoconjugates. Mutations in this gene may result in GM1-gangliosidosis and Morquio B syndrome.
Applications:	ELISA, IHC
Name of antibody:	GLB1
Immunogen:	Fusion protein of human GLB1
Full name:	galactosidase beta 1
Synonyms:	EBP; ELNR1; MPS4B

SwissProt:	P16278
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human liver cancer and Human tonsil
IHC Recommend dilution:	250-500
