技术规格

Background:	This gene encodes a glycoprotein which associates with lysosomal enzymes beta-galactosidase and neuraminidase to form a complex of high molecular weight multimers. The formation of this complex provides a protective role for stability and activity. Deficiencies in this gene are linked to multiple forms of galactosialidosis. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Applications:	ELISA, WB
Name of antibody:	CTSA
Immunogen:	Fusion protein of human CTSA
Full name:	cathepsin A
