| <b>Background:</b>       | The protein encoded by this gene interacts with atrophin-1. Atrophin-1 contains a polyglutamine repeat, expansion of which is responsible for dentatorubral and pallidolysian atrophy. This encoded protein is characterized by two WW domains, a guanylate kinase-like domain, and multiple PDZ domains. It has structural similarity to the membrane-associated guanylate kinase homologue (MAGUK) family. |

| <b>Name of antibody:</b> | MAGI2  |
| <b>Immunogen:</b>        | Synthesized peptide derived from internal of human MAGI2.  |
