Full name:	DEAH-box helicase 8
Immunogen:	Fusion protein of human DHX8
Name of antibody:	DHX8
Applications:	ELISA, IHC
Background:	This gene is a member of the DEAH box polypeptide family. The encoded protein contains the DEAH

(Asp-Glu-Ala-His) motif which is characteristic of all DEAH box proteins, and is thought to function as an ATP-dependent RNA helicase that regulates the release of spliced mRNAs from spliceosomes prior to their export from the nucleus. This protein may be required for the replication of human immunodeficiency virus type 1 (HIV-1). Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2014]
