技术规格

Background:	Serine/threonine-protein kinase that phosphorylates histone H3 at 'Thr-3' (H3T3ph) during mitosis. This positions and activates AURKB and other components of the chromosomal passenger complex (CPC) at centromeres to ensure proper chromatid cohesion, metaphase alignment and normal progression through the cell cycle.
Applications:	ELISA, IHC
Name of antibody:	HASPIN
Immunogen:	Synthetic peptide of human HASPIN
Full name:	histone H3 associated protein kinase
Synonyms:	GSG2

SwissProt:	Q8TF76
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human tonsil and Human liver cancer
IHC Recommend dilution:	40-200
