技术规格

| Background: | The protein encoded by this gene is a member of the bone morphogenetic protein (BMP) family and the TGF-beta superfamily. This group of proteins is characterized by a polybasic proteolytic processing site which is cleaved to produce a mature protein containing seven conserved cysteine residues. The members of this family are regulators of cell growt h and differentiation in both embryonic and adult t issues. Studies in mice and Xenopus suggest that t his protein is involved in mesodermal formation an d neurogenesis during embryonic development. |
