Full name:	NADPH oxidase, EF-hand calcium binding domain 5
Immunogen:	Fusion protein of human NOX5
Name of antibody:	NOX5
Applications:	ELISA, WB
Background:	This gene is predominantly expressed in the testis and lymphocyte-rich areas of spleen and lymph nodes. It encodes a calcium-dependent NADPH oxidase that generates superoxide, and functions as a calcium-dependent proton channel that may regulate redox-dependent processes in lymphocytes

and spermatozoa. Alternatively spliced transcript variants encoding different isoforms have been described for this gene.
