技术规格

Background:	This gene encodes glucocorticoid receptor, which can function both as a transcription factor that binds to glucocorticoid response elements in the promoters of glucocorticoid responsive genes to activate their transcription, and as a regulator of other transcription factors. This receptor is typically found in the cytoplasm, but upon ligand binding, is transported into the nucleus.
Applications:	WB
Name of antibody:	NR3C1(Phospho-Ser203)
Immunogen:	Peptide sequence around phosphorylation site of Serine 203 (S-G-S(p)-P-G) derived from Human GR.
Full name:	nuclear receptor subfamily 3, group C, member 1 (glucocorticoid receptor)
Synonyms :	GR; GCR; GRL; GCCR; GCRST

SwissProt:	P04150
WB Predicted band size:	86 kDa
WB Positive control:	A549 cells lysates
WB Recommended dilution:	500-1000
