技术规格

Background:	Protein phosphatase 2A subunit B isoform R2- α (PPP2R2A) is the component of regulatory subunit B of serine/threonine protein phosphatase 2A (PP2A). PPP2R2A belongs to the R2/B55/PR55 family of regulatory subunit B. Evidence suggests that subunit PPP2R2A enhances TGF- β , Activin, and Nodal signaling pathways and may play an important role in cell cycle regulation. PPP2R2A/PP2A, B55- α /PR55- α isoform interacts with the type I TGF- β receptors via unique WD-40 repeats that contribute to the anti-proliferative function of TGF- β receptors.
