技术规格

Background:	The protein encoded by this gene associates with stem loop IV of U2 small nuclear ribonucleoprotein (U2 snRNP) in the presence of snRNP-A'. The encoded protein may play a role in pre-mRNA splicing. Autoantibodies from patients with systemic lupus erythematosus frequently recognize epitopes on the encoded protein. Two transcript variants encoding the same protein have been found for this gene.
Applications:	ELISA, WB, IHC
Name of antibody:	SNRPB2

Immunogen:	Fusion protein of human SNRPB2
Full name:	small nuclear ribonucleoprotein polypeptide B2
