技术规格

Background:	This gene encodes a member of a family of proteins containing a Bcl-2 homology domain 2 (BH2). The encoded protein is an anti-apoptotic factor that acts as a n inhibitor of caspases 3 and 7 in the cytoplasm. In t he nucleus, it binds to the p53 tumor suppressor prot ein, preventing its association with target genes. Over expression of this gene has been detected in a numb er of different cancers. There is a pseudogene for this gene on chromosome 3. Alternative splicing results in multiple transcript variants
