技术规格

Background:	The Bloom syndrome gene product is related to the RecQ subset of DEXH box-containing DNA helicases and has both DNA-stimulated ATPase and ATP-dependent DNA helicase activities. Mutations causing Bloom syndrome delete or alter helicase motifs and may disable the 3'-5' helicase activity. The normal protein may act to suppress inappropriate recombination.
Applications:	ELISA, IHC
Name of antibody:	BLM
Immunogen:	Synthetic peptide of human BLM
Full name:	Bloom syndrome RecQ like helicase
Synonyms:	BS; RECQ2; RECQL2; RECQL3
SwissProt:	P54132

ELISA Recommended dilution:	5000-10000
IHC positive control:	Human colorectal cancer and human tonsil
IHC Recommend dilution:	25-100
